

CCN Multiclient Program Overview

CCN is in rapid transformation from a research project into a production prototype environment for system and application development.

PARC is providing a select set of companies with the patent and copyright licenses, early access to a commercial licensed code base, and a high performance hardware platform to enable commercial development.

Program Membership

In the first phase from mid 2014 through 2015, we will work with an initial, limited number of approximately 10 founding members. This 18-month financial commitment will be followed by a low annual license maintenance fee for a large and growing portfolio of intellectual property. IP rights start at signature.

Each Program member also has the opportunity to embed one researcher/engineer per company with the PARC CCN team for the 18-month development window (subject to standard PARC Visiting Researcher Agreement).

After this founding phase, we will commence open membership but with substantially higher initial and license maintenance fees. A tiered fee structure based on a percentage of company revenue will help encourage smaller companies to participate as well.

Benefits for Founding Members

Non-exclusive license to all PARC CCN issued patents and PARC know-how, license automatically sweeps in all new PARC CCN patents as they issue.

Early releases of commercially licensed CCN code base with SDK and updates/bug fixes. Selected parts of this code base may be released to open source under a non-commercial license approximately 4-6 months after Program members have access.

Multi-terabit CCN-capable **hardware router**

Bi-monthly Program **update meetings** hosted by PARC

Technical roadmap updated at the bi-monthly meetings

Fee

\$500,000 payment in both 2014 and 2015, followed by a \$250,000 annual maintenance fee in 2016 and \$150,000 maintenance fee in 2017 and every year thereafter.

The Business of Breakthroughs[®]

© Palo Alto Research Center Incorporated

PARC, a Xerox company, is in The Business of Breakthroughs[®]. Practicing open innovation, we provide custom R&D services, technology, expertise, best practices, and IP to Fortune 500 and Global 1000 companies, startups, and government agency partners. We create new business options, accelerate time to market, augment internal capabilities, and reduce risk for our clients.
